(1976), Fracture Mechanics, McGraw-Hill, Inc., 7th. ed., p. 284. 11. Lewis, C.J., and Miller, H.R. (1990), Fracture mechanics, Academic Press, p. 285. Figure 5a. A typical example of brittle fracture. Fig. 6a. Typical example of brittle fracture. Figure 6b. Typical example of brittle fracture. Figure 7a. Typical example of brittle fracture. Figure 7b. Typical example of brittle fracture. Figure 8a. Typical example of brittle fracture. Figure 9a. Typical example of brittle fracture. Fig. 10a. Typical example of brittle fracture. Figure 11a. Typical example of brittle fracture. Figure 12a. Typical example of brittle fracture. Figure 13a. Typical example of brittle fracture. Figure 14a. Typical example of brittle fracture. Figure 15a. Typical example of brittle fracture. Figure 16a. Typical example of brittle fracture. Figure 17a. Typical example of brittle fracture. Figure 18a. Typical example of brittle fracture. Figure 18b. A typical example of brittle fracture. Depending on the number and shape of the boundaries, as well as the contact area of the phases, the strength of the material can vary over a wide range. In this case, as a rule, as the size of the boundaries increases, so does the brittle fracture strength. In order to obtain a material with a higher strength than the original material, an additive is added to give it a high hardness. To obtain a stronger alloy, a part of it is refined after melting (purification from harmful impurities), which increases the density; an additive giving high strength is introduced in larger quantities than for a less strong alloy; refining is performed at a higher temperature. Special additives are added to increase heat resistance and to give the material other properties (strength, hardness, corrosion resistance, etc.). In addition, alloying elements (chromium, nickel, etc.) are introduced into the steel, which, when used in certain ratios with basic sulfur or manganese, give the steel certain properties necessary in a given production. Steel is also used to manufacture other metal products such as wires, pipes, sheets, bars, various alloys, and finished products (gears, pinions, shafts, bushings, bearings, etc.).
