In an effort to show Tesla Motors was getting more efficient at building their cars, The Wall Street Journal posted the following on their website: After making its electric sport-utility vehicle famous, Tesla Inc. is working on another factory milestone. The carmaker is testing an assembly line that will churn out 100 or so Model X sport-utility vehicles a day, allowing it to build more of them than it can make in its Fremont, Calif., plant. The Tesla Model X is the only electric vehicle in the road in the picture, but this doesn't stop the Journal from trying to get the most from their photo. "We know we could not make this happen without our partners at Tesla. We are committed to the high road and we will not use photography to promote the company or vice versa," a spokesperson for the Journal said, as reported by Slate. However, the good news is that the first quarter of 2016 is almost at the finish line and we'll get to see if this was just a dream or if it's true, Tesla will be able to make a production line of 100 Model X per day. As of the publishing of this story, there were only 633 Model X in total.Focke-Wulf Fw 190 D-3 The Focke-Wulf Fw 190 D-3 was a prototype version of the Focke-Wulf Fw 190 that was built by Henschel in 1942.
