There are a number of CAD viewers such as Abaqus, AutoCAD Architecture, Argou, Autodesk Design Review, CadLogic Studio, DraftSight, OECAD, Revit, and WinCAD. Communication with outside systems is also possible, with some plugins providing direct access to programs such as Dassault Systèmes SimScale. However, this is not typically supported directly. AutoCAD R14 or AutoCAD LT are bundled with the Autodesk Exchange Apps, and there are also desktop software programs, such as AutoCAD OnDemand (discontinued in 2010) and AutoCAD Architecture Desktop, that are AutoCAD apps that may be distributed as downloadable software. Standards There are a number of standards supported by AutoCAD. These include standard component specifications such as LISP, the AutoCAD exchange format, U.S. surveyors' specifications, and the Digital Elevation Model (DEM) standard. LISP AutoCAD's languages include two basic language types: symbols and text. Symbols are a set of characters used as objects (primitive objects such as arcs, rectangles, ovals, lines, circles, and polygons) in a drawing. These symbols have properties or attributes (such as a name, a color, an orientation, a dimension, or a tag) associated with them. Text is a stream of characters that is entered and edited in the "Annotation" window and used as a label on the object. AutoCAD has numerous visual LISP languages, and users can create their own. Common visual LISP languages include: AutoLISP AutoLISP is a visual LISP. It is based on the same underlying system as DWG and DGN formats, and can be used to edit existing drawings. AutoLISP language is read by the DWG/DXF reader and interpreted by the AutoCAD application. It is also supported as an open standard by most Autodesk products, including AutoCAD Architecture and AutoCAD Electrical. AutoLISP was previously known as "Visual LISP" or "AutoVisual". VRML VRML (vector-based raster, or vector raster) is an extension of LISP that uses visual presentation (i.e. vector graphics and text) instead of 3D geometry. VRML provides 2D, 3 ca3bfb1094

The new Xbox 360 Pro bundle with Kinect will be available on November 15th Microsoft has announced the availability of the new Xbox 360 Pro bundle. The Kinect-enabled bundle will cost you 399 Euros or \$529.99. It contains the new Xbox 360 Elite, Kinect, 4GB hard drive, HDMI cable and power cord. The Elite comes with an X-Box Kinect sensor that can see in the dark, record video, is waterproof and has an improved image sensor. The bundle will be available on November 15th. I wouldn't say \$500 is too much. It's actually pretty reasonable for that level of hardware. I got the Elite for half of that price a couple years ago. Just wish they would've included a Kinect stand for it. I don't have a Kinect yet so I'm waiting for a new one before I jump on that train. I wouldn't say \$500 is too much. I don't have a Kinect yet so I'm waiting for a new one before I jump on that train. I definitely agree with the price. I'm looking at it at \$379.99 here so I'm not crazy about spending more than that. I'll probably end up getting a Kinect for \$60 or so with the Elite since I'm a Kinect person anyways. I do agree that they should include a Kinect stand in the bundle. If the Xbox 360 Elite was \$400, then \$500 for a Kinect is a little ridiculous, but it's probably all about MS's expected retail price (as well as the fact that they can price it even higher than they could've otherwise). I thought it was more expensive than that. And didn't they just announce a Kinect for \$30? I'm sure it's the same exact deal. For me it was an expected price when I bought the Xbox Elite. After all it is a new and improved model. I couldn't find the DVD out of the box, just music, but I'm still considering it a value for the price. But it does feel like I'm being
